

PART B: Intervention Design

What would you actually do?

You've been placed at this company as the new analyst. You have your diagnosis from Part A. For each of the three situations, answer:

SITUATION A:

QUESTION 1) What is the first conversation you have, and with whom? (Not a meeting. A conversation. Who do you talk to first, and what do you ask or say?)

ANSWER 1) As per the diagnosis, As an Analyst fresher in the company I would like to have a simple conversation with the HOD first about the structure of the company. I will say "As I noticed you raised the agenda of out-of-specialization about the result, help me understand better to know this matter carefully."

QUESTION 2) What changes in the first 2 weeks? (Human and process changes only. No tools yet. What do you do with people, meetings, habits, or communication that shifts the dynamic?)

ANSWER 2) Firstly, I'll analyze the structures and patterns in each of the meeting clearly, observe silently and write in bulletpoints what all things to get conquered. Then, I'll have a conversation with HOD's what are the biggest problems they facing in the company building a soft behaviour with them. Then, I'll share what I observe about the company facing problems and where the roots aren't getting escalated and where is the exact problem to the COO. Let the COO react and tell about the backstory of the company.

QUESTION 3) Now design the system or tool that reinforces the change. Be specific:

What does the user see? (Describe the interface, the form, the email, whatever the HOD or supervisor actually interacts with)

A google form to interact and know about the technical issues facing, what products, how it can be resolved, and know about the view points in each departments.

2. What is the workflow? (Who enters what, where does it go, who sees it, what triggers what)

HOD or Supervisor (Google form) -> Unified tracker (attendance) -> assigned work done within the deadline -> COO gets daily mails -> Resolved items archived.

3. What technology do you use? (Google Sheets, Excel, Power Automate, Claude, WhatsApp, SAP, or anything else. Name it and say why.)

Google form, Unified Tracker, Power automate, and whatsapp groups.

QUESTION 4) How do you get buy-in from a supervisor who has been on the shop floor for 15 years and thinks this is a waste of time? (Write the approach. Not a generic "build trust" answer. What specifically would you say or do with this person?)

ANSWER 4) You find them doing something they're good at – on the floor, at their bench – and you watch. Then you ask:

"How do you usually know when a batch is going to give trouble before it actually does? What's your read on it?"

You let them talk. You listen like you mean it. Because you actually want to know.

A week later, when you're introducing the tracker, you say:

"Remember what you told me about catching issues early? That's exactly what this is built around. You flag it, it gets resolved, and nobody's bothering you about it in the review meeting anymore. Less noise for you, not more."

You frame it as solving their problem, not management's visibility problem. Because if it doesn't help them, it won't stick – and you know that.

Situation B:

QUESTION 1) What is the first conversation you have, and with whom? (Not a meeting. A conversation. Who do you talk to first, and what do you ask or say?)

ANSWER 1) I would like to go ahead with the Manager about Why he stopped using and asks "What was the updated work for last week tracker, help me understand".

QUESTION 2) What changes in the first 2 weeks? (Human and process changes only. No tools yet. What do you do with people, meetings, habits, or communication that shifts the dynamic?)

ANSWER 2) Firstly I will have daily 10 mins conversations with the COO about every review about the tracker, and then remove all the previous unfinished excel sheets and lastly, asks the COO to acknowledge the managers who adopt the process early.

QUESTION 3) Now design the system or tool that reinforces the change. Be specific:

Add one column: "Status last updated by" + timestamp. Not for surveillance. So the COO can see at a glance who's current without asking anyone. Add one automated alert: Power Automate – if a row hasn't been updated in 72 hours, the owner gets a WhatsApp/email nudge. Not from you. From the system. That distinction matters. You're not chasing. The system is reminding. Weekly digest to CEO: Auto-generated from the Sheets data. One page. Open items, resolved this week, aging issues. CEO gets diagnostic data without attending a single extra meeting. This is the PDGMS vision in practice.

QUESTION 4) How do you get buy-in from a supervisor who has been on the shop floor for 15 years and thinks this is a waste of time? (Write the approach. Not a generic "build trust" answer. What specifically would you say or do with this person?)

ANSWER 4) You've been doing this for 15 years. You know what happens when nobody tracks things properly – stuff falls through, and somehow it's your problem. This tracker means when something is in there and assigned to someone else, it's not on you anymore. It's documented. You're not selling a tool. You're selling protection from blame and reduction of ambiguity. For a senior operator, those are the two things that actually matter.

Situation C:

QUESTION 1) What is the first conversation you have, and with whom? (Not a meeting. A conversation. Who do you talk to first, and what do you ask or say?)

ANSWER 1) I would like to go ahead with the COO and asks "Right now you connect with 12 managers daily. When there are 8 active CDMO projects instead of 2, how does that change? What breaks first?".

QUESTION 2) What changes in the first 2 weeks? (Human and process changes only. No tools yet. What do you do with people, meetings, habits, or communication that shifts the dynamic?)

ANSWER 2) Firstly I will map the information workflow and then ill reach to the HOD's who are natural information connectors and then Introduce a lightweight daily priority signal.

QUESTION 3) Now design the system or tool that reinforces the change. Be specific:

Daily RAG (Red-Amber-Green) Status Layer on top of the Unified Tracker.

Each project gets one row. Each HOD updates their RAG at end-of-day. Power Automate flags any Red to COO immediately. Amber items aggregate into the 8 AM digest. Green items require no action.

At 8 CDMO projects, the COO isn't calling 12 managers anymore. They're looking at 8 rows and calling 2.

Technology: Google Sheets + Power Automate + WhatsApp Business (for supervisors). Claude can be used to summarize aging issues into a weekly narrative report for the CEO – structured prompt, run weekly, output goes straight into the digest email.

QUESTION 4) How do you get buy-in from a supervisor who has been on the shop floor for 15 years and thinks this is a waste of time? (Write the approach. Not a generic "build trust" answer. What specifically would you say or do with this person?)

ANSWER 4) "Right now you're updating me verbally every morning. I'm just asking you to type that same thing – one word: Red, Yellow, or Green – into one cell. Same information. Thirty seconds. And then I stop calling you." The promise of fewer interruptions is a real incentive for someone who has been on the floor for 15 years and values their time.
